

Hello. I am a paying XMRadio subscriber and could not enjoy the service more. I listen mostly to the Broadway showtunes station, something I could not even imagine hearing on local radio here in Nashville. (And by the way, I had worked in local radio in the past for 5 years.) Because this is a paid service, I feel it should be able to offer whatever content its listeners will support, very much like cable television. I don't even have the weather and traffic information yet in my area on XM, but I want to protect the company's right to offer it when it becomes available. How is offering local weather, for example, any different than our cable company offering The Weather Channel, with its local forecasts every ten minutes? I ask you to please reject NAB's petition 04-160 and support XMRadio's ability to provide whatever programming its constituents will support. Thank you very much.
